Networking: Each phone comes with a built in switch that allows you to connect the phone to the Internet connection in an office then connect the phone to a PC. If your existing network provides gigabit speeds, then a phone with gigabit capability is recommended.

PoE: Power over Internet allows the phone to be used without the included power adapter if your network switch is capable of providing power to devices connected to it.

Headset Capable: All phones allow the use of external headsets. Please make sure to check the headset you buy to ensure it will work with your phones.
